Seneca Z-PC Line module: **Z-8TC-LAB**

The Z-8TC-LAB module acquires up to 8 single-ended signals (voltage-type, from the: signal generator or thermocouple) and it converts them to a digital format (normalized measure).

General characteristics

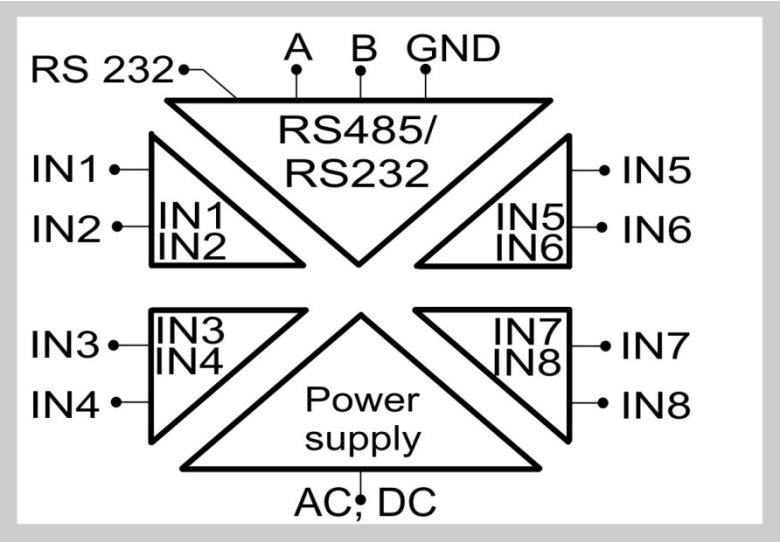

- It is possible to choose if measure is voltage (mV) or temperature (°C) type, for each couple of input signals: IN1 and IN2, IN3 and IN4, IN5 and IN6, IN7 and IN8
- It is possible to enable/disable each input
- Configuration of a filter applied to each couple of input signals
- It is possible to enable/disable cold-junction compensation, for each couple of input signals
- It is possible to configure module (node) address and baud-rate by Dip-Switches
- It is possible to add/remove the module to/from RS485-bus without disconnecting the communication or power supply
- It is possible to switch automatically from RS485 to USB or vice versa

Features

INPUT	
Number	8
Resolution	14bits (if filter=0-1); 15 bits (if filter=2-7)
Sampling frequency	Configurable between: 48Hz (if the filter is deactivated), 20Hz (if filter=1), 11Hz (if filter=2-7)
Rejection	50Hz or 60 Hz
Filter (0-7)	IIR and FIR; configurable between: 0 (deactivated), from 1(min) to 7(max)
Accuracy	Initial: 0.1% of E.E.S. (Electrical End Scale)
	Thermal stability: < 100 ppm/°K
	EMI: < 1%
Protection	This module provides inputs protection against the ESD (up to 4kV)
Voltage-type IN (from the thermocouple)	Bipolar with E.S.S./E.E.S. (Electrical Start/End Scale) unchangeable between: -10.1mV..+81.4mV. TC-type: J, K, R, S, T, B, E, N. Automatic detection if a TC interruption occurs: if this option is enabled, test current:<50nA. Input impedance: > 10 MΩ

CONNECTIONS	
RS485 interface	IDC10 connector for DIN 46277 rail (back-side panel)
USB interface	Micro USB connector
1500 Vac ISOLATIONS	
	Between: power supply, RS485/USB, inputs 1/2, inputs 3/4, inputs 5/6, inputs 7/8

POWER SUPPLY	
Supply voltage	10 – 40 Vdc or 19 – 28 Vac (50Hz - 60Hz)
Power consumption	Max: 0.6W

The power supply transformer necessary to supply the module must comply with EN60742 (Isolated transformers and safety transformers requirements). To protect the power supply, it is recommended to install a fuse.

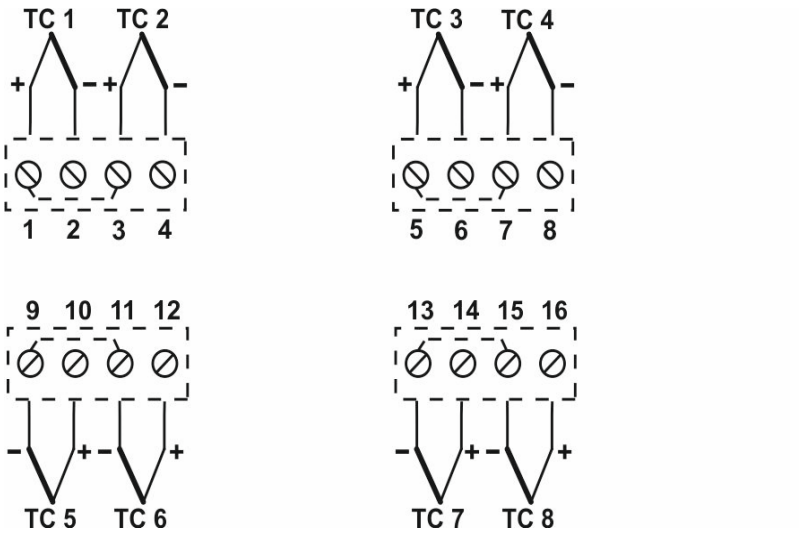

Input connections

The Z-8TC-LAB module has a digital thermometer (DT sensor) internally to compensate the cold-junction effect, if a thermocouple is connected to input.

To decrease the signal-acquisition errors due to noise effects, short-circuit each unused TC-type input to the GND, for each couple of inputs. In particular:

- unused screw terminal 1 and/or 3 to the screw terminal 2 or 4 (GND for input 1 and input 2);
- unused screw terminal 5 and/or 7 to the screw terminal 6 or 8 (GND for input 3 and input 4);
- unused screw terminal 9 and/or 11 to the screw terminal 10 or 12 (GND for input 5 and input 6);
- unused screw terminal 13 and/or 15 to the screw terminal 14 or 16 (GND for input 7 and input 8).

Dip-switches table

☞ In the following tables: box without circle means Dip-Switch=0 (OFF state); box with circle means Dip-Switch=1 (ON state).

BAUD-RATE (Dip-Switches: DIP-SWITCH STATUS)		
1	2	Meaning
		Baud-rate=9600 Baud
	●	Baud-rate=19200 Baud
●		Baud-rate=38400 Baud
●	●	Baud-rate=57600 Baud

ADDRESS (Dip-Switches: DIP-SWITCH STATUS)						
3	4	5	6	7	8	Meaning
						Address and Baud-Rate are acquired from memory(EEPROM)
					●	Address=1
				●		Address=2
				●	●	Address=3

Propagation time: interval time between a step change of input electrical signal and corresponding change of measure in register (at 115kBaud). The propagation times shown in table 1 refer to 50Hz rejection; to obtain the propagation times refer to 60Hz rejection, divide them for 1.2.

LEDs for signalling

In the front-side panel there are 4 LEDs and their state refers to important operating conditions of the module.

LED	LED status	Meaning
PWR	Constant light	The module power is on
ERR	Constant light	The module has at least one of the errors described in RS485 Registers table
	Blinking light	Module failure
RX	Constant light	Verify if the bus connection is corrected
	Blinking light	The module received a data packet
TX	Blinking light	The module sent a data packet
	Constant light	Module failure

CONFIGURATION SOFTWARE

To configure Z-8TC-LAB with a PC please download the Easy Setup suite or Z-NET suite.

The softwares are free-downloadable from www.seneca.it.
