ASSEMBLY GUIDE

Follow the steps below to install the option board:

1 - Make sure the instrument is disconnected from the power supply to avoid damage or safety hazards.

2 - Remove the front display of the instrument, taking care not to damage the internal components, and slide out the device board.

3 - Connect the S311OPZ board to the S311A board using the supplied flat cable.

Caution: leave the two header PINs (dipslay side) free for proper use

4 - Insert the two connected boards into the plastic case of the S311A and switch on the power supply again.

5 - To set the parameters of the option card use the programming menu of the instrument or the software Seneca Easy Setup software.
